

Static holdability depends on load and current limit

- Nominal model + friction
- INF-P assumption + friction
- 3.2 A capacity · 0.448 N·m
- 2.4 A capacity · 0.336 N·m
- 2.4 A governor budget · 0.219 N·m

Colored bands pass the static torque test; pale regions fail. Motion also needs acceleration, braking and voltage headroom. INF-P is assumed, not D/E data.
